DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to a method and system for distributing travel information in a network using plurality of inquiries, classified in class 701, subclass 200.
 - II. Claims 14-25, drawn to a method for providing travel information, classified in class 701, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the pluralities of inquiries in a network using a storage device (with client-server communication/request) is not limited to a specific subject matter. The subcombination has separate utility such as a distance range in proximity to the location of interest; specifying expenses (dollar limit); specifying a number of travelers that will depart; and the use of geocoding within a specified range.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3661

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
